

WARN Watch ☒ how your free 30-day watch works

Thank you for starting a free 30-day watch. No card, no account, nothing renews.

1. At checkout you entered the employers (and/or states) to watch ☒ up to 3 employer terms, or one whole s
That is all we need. No account to create, nothing to install.
2. On our next daily refresh (usually within a few hours, at most 24h) your private alert page
and its RSS feed are generated. Open
apventureengine.github.io/warn-act-notices/alerts/
and type the email address you used at checkout plus the PASSPHRASE you chose in the checkout
box (capitals and spacing don't matter). Your browser works out the private address locally from
those two ☒ we never publish your email, and nobody who only knows your email can open your page.
Keep the passphrase somewhere you can find it. Bookmark the page, or add its feed.xml to any RSS reader.
3. Every day we collect new WARN Act layoff notices from 39 state portals, normalize them,
and run your list against the same-day build. An employer term matches the name as published,
our canonical employer name and the trade name, so 'general motors' also catches
'General Motors, LLC -- Lansing Region'. A state watch matches every new notice in that state.
4. Each match shows employer, location, workers affected, notice date, effective date and the
state source. Quiet days are logged as 'checked' so you can see the watch is alive.
5. Your watch runs for 30 days from checkout. After that the page shows an 'ended' banner and a link
to keep watching for \$49 / year (one payment, 25 terms, no auto-renewal).
Nothing is ever charged automatically.

Sample of what a match row looks like (real recent notices from the current build):

STATE	EMPLOYER	LOCATION	EMPL.	NOTICE DATE
NJ	UBS	Weehawken	58	2026-11-01
UT	Point Designs	Bountiful	8	2026-10-30
WA	Georgia-Pacific Gypsum	Tacoma	120	2026-09-01
IA	Wells Fargo	West Des Moines	5	2026-09-01
GA	FPL Food	New Savannah Rd Aug...	179	2026-08-31

Need to change your list, or the page is not live after 24 hours? Reply to your Gumroad receipt or open an
issue at github.com/APVentureEngine/warn-act-notices/issues ☒ both reach the operator.

Email alerts are not built yet; the page + RSS feed is the delivery. When email exists, existing watches get it free.

Data: the free, open 39-state WARN dataset at github.com/APVentureEngine/warn-act-notices.

States we do not cover (and why) are listed on that page.
